Allowable Subject Matter

The following is an examiner's statement of reasons for allowance:

After extensive searching and analysis of the best prior art in light of Applicant's claimed invention, Examiner agrees with the findings of the Board of Patent Appeals and Interferences, ("BPAI"), finding Applicant's claimed invention patentable.

Specifically, on 22 March 2006, the BPAI reversed Examiner's final rejection noting as follows:

We will not sustain the examiner's rejection of claims 1, 3, 5, 7 and 10 for essentially the reasons argued by appellants in the brief. Specifically, we agree with Appellants that neither Cherabuddi nor Arimilli teaches performing a speculative write of the next directory state to the coherence directory for the data block as claimed. Cherabuddi teaches that speculative read requests are cancelled if a write request is received before the speculative read request, whereas the speculative read request is validated if it is received before a write request [column 4, lines 50-58]. There is no suggestion of performing speculative writes of the next directory state for the data block. Arimilli clearly teaches that the directory of an L2 cache is not updated until after the speculation has been validated [note box 43 of Figure 3]. Thus, we disagree with the Examiner's position that Arimilli teaches a speculative write of the next directory state as recited in the claimed invention.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
